SUMMARY

Enthusiastic **Python Developer** with hands-on experience in building data-driven web applications and machine learning systems. Proficient in **Python, Flask, Streamlit, SQL**, and frontend basics (HTML/CSS/JavaScript), with a focus on model deployment. Seeking an entry-level role to leverage my skills and contribute effectively to software teams.

SKILLS

Programming Languages: Python, JavaScript
Frontend Development: HTML5, CSS3
Backend Development: Flask, Streamlit
Database Management: MySQL, MongoDB
Machine Learning & Data Analysis: scikit-learn, pandas, NumPy, matplotlib, seaborn
Version Control Systems: Git, GitHub
Technical Concepts: REST APIs, CRUD, model deployment, supervised learning, unsupervised learning

PROJECTS

HealthAI Predictor Link *Dec 2025 - Jan 2026*

- Built an **AI-powered health risk assessment system** using machine learning and Streamlit web app.
- Trained a **Random Forest classifier** to predict whether an individual is healthy or at high health risk based on clinical and lifestyle data.
- Implemented an interactive UI that visualizes probability scores and feature importance charts to help users understand predictions.
- Developed a data processing, model training, and deployment pipeline with **Pandas**, **scikit-learn**, and **Streamlit**.
- Integrated model serialization and loading logic for production-ready usage.

Online Shoppers Purchase Prediction System Link *Nov 2025 - Dec 2025*

- Created a **complete end-to-end ML deployment project** that predicts whether a visitor will make a purchase on an e-commerce platform.
- Processed and prepared browsing behavior and session data using **Scikit-learn preprocessing pipelines**, including scaling and encoding.
- Evaluated multiple classification algorithms and selected the **Decision Tree classifier** for the final model based on strong performance and interpretability.
- Packaged and deployed the model as an interactive **Streamlit app** to demonstrate a real-world ML engineering workflow.
- Included data analysis, model training, serialization, and UI integration for user download and local execution.

Loan Risk Analyzer Link *Jan 2026 - Feb 2026*

- Developed a **machine learning loan risk prediction system** to assess the likelihood of loan approval and default risk.
- Conducted end-to-end data preprocessing, including handling missing values, encoding categorical variables, and feature scaling to prepare the dataset for modeling.
- Assessed and compared multiple classification models to select the best performing algorithm for accurate risk predictions.
- Created a **Streamlit web app** as the user interface for real-time loan risk analysis, enabling interactive prediction based on user-provided inputs.
- Exhibited strong understanding of supervised learning, model evaluation metrics, and deployment workflows.
- Tech Used: Python, Machine Learning, pandas, scikit-learn, Streamlit

EDUCATION

BTech CSE
Dr APJ Abdul Kalam Technical University ,Lucknow**, 7.0+ CGPA**

CERTIFICATIONS

AIML Prime | Apna College
Web Devlopment | Apna College

SRENGTHS

- Demonstrates strong problem-solving and analytical thinking skills.
- Exhibits effective communication abilities and fosters team collaboration.
- Shows a rapid learning capability with a keen interest in backend and AI/ML systems.
- Capable of developing applications that are deployment-ready.
